

## THE WORLD'S MOST EFFECTIVE POP FILTERS!

### NO MORE BURSTS!

The Proscreen™ is far more effective than fabric filters. Instead of simply diffusing bursts, the Proscreen™ redirects airflow downward away from the microphone. Even close vocal work will not cause bursts to reach the microphone.

### NO MORE MUDDY VOCALS!

The large openings in the metal screen allow sound to pass to the microphone unobstructed, preserving critical detail.

### NO MORE CLIPPED TRACKS!

With the Proscreen™ in place, recording engineers can maximize recording levels without the risk of clipping caused by bursts (extremely important with digital formats).

### NO MORE GERMS!

In addition to its sonic advantages, the Proscreen™ can be washed between sessions.

*"This one works!"*  
George Petersen  
MIX magazine

The Stedman Proscreen™ is the original all metal pop filter developed for the professional recording engineer. Its unique patented material completely eliminates bursts while delivering clear, uncolored vocal tracks. Lifetime Warranty included.

### PROSCREEN™ PS101

The original Proscreen™ PS101 has proven its effectiveness in recording studios around the world. This model has a 4.6" diameter screen and a 13" gooseneck with clamp.

### PROSCREEN™ XL

Our Proscreen™ XL is an advanced design that offers a large 6" diameter screen with an ultra-fine rubber surround that does not interfere with sound. Setup is easier with extended clamp and a 13" heavy duty gooseneck.

Patent Pending
